Name of veterinary medicinal product
FEBRIVAC 3-PLUS
Inactivated adsorbed vaccine against virus enteritis, botulism and hemorrhagic pneumonia in minks,
Suspension for injection for subcutaneous administration

Statement of the active substances and other ingredients:
Inactivated mink parvovirus, strain E-mink-F1
(before inactivation)

Clostridium botulinum type C toxoid
before toxoidation

Pseudomonas aeruginosa, inactivated
Hab's serotypes 5, 6 and 7/8
(before inactivation)

Aluminium (as hydroxide)

* tissue culture infectious dose
Host system for mink parvovirus: feline lung cell line
** mouse lethal dose

Indication:
For active immunization of minks against virus enteritis, botulism and hemorrhagic pneumonia.
An immune protection is developed approximately 3 weeks after vaccination and lasts at least 1 year.

Contraindications:
Do not use for:
- vaccination of clinically ill and weakened animals, especially after transportation or transfer to different housings
- vaccination of pregnant vixens

Adverse reactions:
Not known.
If you notice any serious effects or other effects not mentioned in this package leaflet, please inform your veterinary surgeon.

Target species:
Mink
Dosage for each species, route and method of administration

Basic immunization of kittens:
A single dose of 1 ml is to be administered subcutaneously between the 6th and 8th week of age at the earliest. If the first vaccination is affected by the presence of maternal antibodies, then a second vaccination can be given at an interval of 3-5 weeks.

Breeding animals:
Vaccination at least four weeks before the mating season.

An annual booster vaccination is recommended.

Advice on correct administration:
Shake the vaccine well before use.
Do not mix with other vaccines or immunological products.

Withdrawal period:
Not applicable.

Special storage precautions:
Keep out of the sight and reach of children.
Store in a refrigerator (2°C - 8°C). Protect from light.
Do not freeze.
Do not use this veterinary medicinal product after the expiry date which is stated on the label.
Opened bottles should be used up within 8 hours.

Special warnings:
Safety and efficacy data are available which demonstrate that this vaccine can be administered with the company-own distemper vaccine on the same day but must not be mixed.
No information is available on the safety and efficacy of this vaccine when used with any other veterinary medicinal product except the product mentioned above.
A decision to use this vaccine before or after administration of any other veterinary medicinal product therefore needs to be made on a case by case basis.

Special precautions for the disposal of unused product or waste materials, if any:
Any unused vaccine or waste materials should be disposed of in accordance with local requirements.

Date on which the package leaflet was last approved:
08/2013
